Jig-Head gap check	OPT-J0375
MBIS3 (Mimaki Bulk Ink System)	OPT-J0364
Eco case for 600 ml ink bag	OPT-J0361

 Some of the samples in this folder are artificial renderinos • Soecifications, design and dimensions stated in this folder may be subject to change without notice (for technical improvements, etc. • The corporate and merchandise names written on this folder are the trademark of the respective corporations • Inkjet printers print using extreme fine dots, so colours may any after replacement of the printing heads, also note that if using multiple printer units, colours could vary slightly from one unit to other unit due to slight individual differences • Compositor's errors reserved

Versatile Print and Cut Function delivers amazing creative production capability from a single machine...

The multiple functions of the CJV300 models ensure high-quality printing and highaccuracy cutting enabling the production of labels, stickers and vehicle wraps with ease.

Continuous-register mark-detection function enables continuous media cutting.

The CJV300 automatically detects all register marks set by RasterLink6 on the media, and cuts contour lines precisely by utilising simultaneous automatic calibration.

Print and cut on no-register mark media / Cut and print function

Media up to 1m in length does not require register marks, reducing media wastage.

Segment correction function facilitates precision cutting over longer-length prints.

This function detects intermediate register marks and enables four-point corrections for each segment to ensure accurate contour cutting over longer-length prints, even if the image is distorted.

Over-cut and corner-cut functions ensure clearly cut edges with no residues.

The over-cut function ensures sharply cut edges with no residues by making a cross cut at the start and end positions of the contour cutting. The corner-cut function ensures sharply cut edges by making cross cuts at each corner.

Clamp-pressure automatic-switching function enables continuous operation.

The pressure of the media clamps is automatically optimised for printing and cutting. No pressure adjustment by the operator is required during continuous operation.

"Cut and Print" function improves the workability of thin materials.

This function prevents common problems, such as film separation and faulty cut results, by cutting the media before printing.

Versatile cutting methods satisfy a range of market demands.

"Half-cut" produces a series of half and die cuts, leaving a few connection points that retain the printed image on the medium. "Die cut" completely cuts the printed image from the medium. "Perforation cut" is useful for clipping images from the medium, used as crease lines.

Sophisticated RIP Software maximizes performance

3-layer printing Enables simultaneous 3-layer printing: e.g. Colour \rightarrow White \rightarrow Colour

Web update function is supported: This facility enables easy program updates and profile downloading to be performed via the internet.

3. Printing progress can be monitored on the main screen

Item	Colour	Item No.	Remarks

High-speed, integrated printer/cutter-

Mimaki

ENGINEERING EXCELLENCE AND CREATIVE INNOVATION

Founded in Japan in 1975, Mimaki Engineering has steadily grown by reputation and influence into a global company with large operational bases in Asia and the Pacific, United States and Europe

Renowned for award-winning performance, peerless build quality and innovative technology, Mimaki has established itself as a leading manufacturer of wide-format inkjet printers and cutting machines for the sign and graphics, textile and apparel and ndustrial markets. In addition. Mimaki also provides a comprehensive range of supporting products: hardware, software and associated consumable items, such as inks and cutting blades

From outdoor signage and billboards to interior decoration and furnishing, from packaging and labels to promotional gifts and apparel, Mimaki s committed to developing technology that sets new industry standards, producing machines and products that turn the imagination of our customer into breath-taking reality

··· Mimaki delivers

Mimaki's latest integrated printer/cutter delivers new levels of creativity with versatile and vibrant ink types, including new Silver, Orange and Light Black. CJV300 Series achieves the highest print speeds in its class, with innovative technologies ensuring unrivalled output quality for signmakers, display graphics professionals and printshops.

CJV300 series delivers...

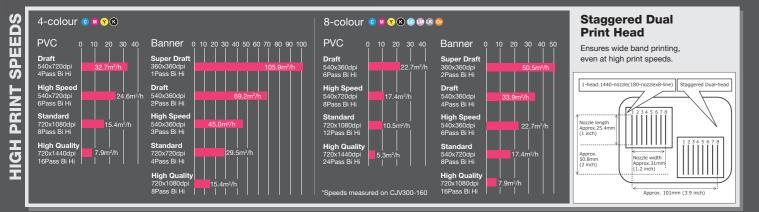

- Fast printing speeds up to 105.9m² per hour
- High quality print resolution of up to 1,440dpi
- Two different printing widths: 1,361mm and 1,610mm
- Choice of multiple solvent ink sets, including:
- 10-colour options (SS21) including; Silver, Orange, Light Black & White inks
- Nozzle Check Unit (NCU) and Nozzle Recovery System (NRS) ensure continuous print operations
- UISS and optional MBIS III on board 2 litre bulk ink system
- 3-way intelligent heater

Create ... Metallic stickers, Decals, Die-cut labels, Signage, Vehicle graphics, Banners, Posters, PoS, Backlit & Exhibition graphics, Garment marking, Canvas prints and much more...

KEY TECHNICAL FEATURES ····

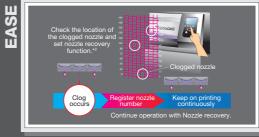

State-of-the-art integrated printer/cutter for creative applications

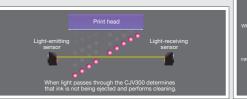

Productivity maintenance - NRS*

he NRS substitutes defective nozzles with non-defective ozzles until the technician arrives. This feature enables interrupted print operations and continuous productivity. NRS: Nozzle Recovery System *2 10 nozzles per nozzle row can be registered.

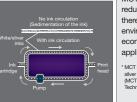

Prevention, print quality problems - NCU*

The CJV300 is equipped with Mimaki's original automatic NCU. Clogged nozzles are automatically detected and cleaned by the NCU. If the clogging is not resolved by cleaning, the CJV300 automatically sets the nozzle recovery function NRS and resumes printing. These functions significantly reduce the waste printing caused by clogged nozzles during a continuous printing run.

Stable printing using the ink circulation system - MCT*

MCT is a standard feature included to effectively avoid the settling of white and silver pigments in the ink lines by regularly circulating the ink. It prevents print troubles and enables stable output from the start of operation. In addition

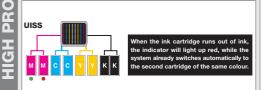

MCT contributes to reduction of ink waste thereby supporting vironmentally and conomically friendly

Iver Inks. /ICT = Mimaki Circulatior

Uninterrupted Ink Supply System (UISS)

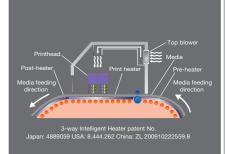

Utilises two cartridges per colour in 4-colour mode. When one cartridge runs out of ink the system switches automatically to the second cartridge of the same colour, enabling long ttended printing

3-Way intelligent heater

A 3-way intelligent heater fixes droplets placed on media By using Mimaki's original technology in heating the media at a controlled temperature, ink can be fixed while maintaining high colour development and high image guality. Thus the CJV300 provides both steady colour development and easy handling after printing.

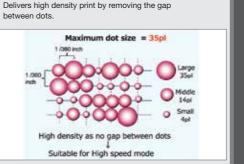

- Pre-heater: Heats media to the optimum temperatur before printing
- Print heater: Dries ink after it lands on media before i bleeds, improving colour development
- Post-heater: Enhances ink drying and achieves stable take-up.
- Top blower: Air blower supports drying of ink

Waveform Control Technology

Ensures high quality print resolution, by jetting ink drops in

Large ink dot size in high

speed mode

Silver Ink (For brilliant metallic effects)

ewly developed SS21 silver ink is available. Being 1.67* times brighter than conventional silver inks, SS21 ink adds brilliant nd beautiful mirror effects to print results

Silver colour added to catch copies and logos strikes a profound npression on the viewers, which akes silver printing very appealing.

By using the orange ink as a process colour, 94.8% of the PANTONE colour chart is covered with approximate colours. Thanks to a wider gamut with the orange ink, food freshness can be without introducing unexpected colour shifts. Light black simulated, and corporate colours can be faithfully represented.

The light black ink improves the printed grayscale gradation. It also faithfully represents monochrome data ink ensures a more accurate colour representation

The intensity of brightness in the

silver ink varies as per the viewing

attracts the viewer.

angle. Such a high level of brightnes
